

Merritt College Technology Apprenticeship

Cybersecurity – Ethical Hacking, Cybersecurity – Information Security: CodePath, Applications Security, Infrastructure Security, DevOps
Cybersecurity Technician Apprenticeship - Alameda County

Cybersecurity Support Technician Apprenticeship – DOL ONET Code: 15.1112

RAPIDS Code: 1059CB in partnership with

Rightvarsity Technology Workforce Immersion Program

the

Consortium of Information Systems Executives (CISE)

and

East Bay Inter-Agency Training Council (EBIATC)

The Department of Labor (DOL) and California Department of Industrial Relations (DIR) have created opportunities to gain technology skills leading to gainful employment while providing employers with a highly skilled and experienced workforce. Because it is funded and driven by industry's needs, the apprenticeship system provides an effective balance between learning by doing and theoretical instruction.

California's DAS promotes apprenticeship training through the creation of partnerships among industry, labor, education and government. It consults with program sponsors and monitors programs to ensure high standards for on-the-job training (OJT) and supplemental classroom instruction. In collaboration with CISE Merritt has created industry-informed courses and programs that serve as pre-apprenticeship training and Related Technical Instruction (RTI) for several state and federal apprenticeships. Merritt has formed a partnership with Right Varsity Technology Workforce Immersion Program, LLC which holds federal and state apprenticeships in technology. Finally, Merritt is part of the East Bay Inter-Agency Training Council (EB/IATC) – a consortium of government and community-based job and workforce development organizations.

A unique code number is used to verify DOL Apprenticeship holders. The code for our Rightvarsity partner is:

2018-72095

CA-DIR apprenticeships [are identified and verified online using a URL and Web site.](#)

In this document you will find front matter common to all Merritt-Rightvarsity Apprenticeships such as the service letter establishing Merritt as a Local Education Agency (LEA) for Rightvarsity. Toward the end you will find information specific to implementing the apprenticeship named above. This apprenticeship, whether state (CA-DIR) or federal (DOL), will be aligned with the DOL Competency Based Occupational Framework (CBOF) for apprenticeships. The Work Process Schedule (WPS) is where you add detailed information about specific educational and employer components of the Cybersecurity Technician apprenticeship. Merritt has five (5) programs that prepare students for the Cybersecurity Technician Apprenticeship.

Merritt Cybersecurity Program 1 – Ethical Hacking Certificate of Achievement

Preparation in the Knowledge Skills and Abilities (KSA) required to attack systems (red team), defend systems (blue team), or combinations of the two (purple team.) Program includes participation in competitions such as the National Cyber League (NCL) or other industry recognized set of interactive cybersecurity scenarios where entrants are required to demonstrate these KSA. Competition reports provide an advantage to program participants in securing employment in the field, serving as scouting reports for employers recruiting individuals into Information Security (InfoSec) careers. The hands-on assignments are intended to give students the experience with sophisticated intrusion efforts. This certificate indicates a candidate has studied security issues and participated in interactive scenarios and competition to sharpen skills in this area.

Upon successful completion of this program, students will be able to:

1. Describe the security incident response process.
2. Fulfill one or more roles on a security incident response team.
3. Participate in information security incident response teams

Degree Requirements:

Year 1 First Semester

Credit Hours: (6 - 8 Required)

CIS 005 or	Introduction to Computer Science	5
CIS 006 or	Introduction to Computer Programming	5
CIS 007 or	Control Structures and Objects	4
CS 020 and	Python Application Programming	3
CIS 071 or	Introduction to Information Systems Security	3
CIS 072	Systems and Network Administration	3

Year 1 Second Semester

Credit Hours: (7 Required)

Courses are scheduled over two 6-week sessions each semester.

Courses are listed in the order they should be taken.

CIS 055 and	Hacker Techniques, Exploits & Incident Handling	3
CIS 060 and	Computer Forensics Fundamentals	3
CIS 247	Information Systems Skills Challenge	1

CIS 247 requires participation in one round of Ethical Hacking Competition: National Cyber League (NCL), CyberPatriots, CyberDefenders, SANS Cyber fast track, or equivalent.

Total: 13.000 - 15.000

The hyperlinked course numbers on this and the following pages can be used to access the Course Outline of Record (CoR) which provides detailed information on learning outcomes and course content useful for completing the Work Process Schedule for apprenticeships. Merritt's courses are aligned with the NICE framework and course KSA mappings are available at <https://niccs.us-cert.gov/training/search/merritt-college>

Merritt Cybersecurity Program 2 – Application Security Certificate or A.S. Degree

The Applications Security program provides best practices and competencies for students to design, install and implement secure applications and services; manage, and optimize application to ensure compliance with security controls; help prevent, detect, investigate and respond to application security threats and attacks; facilitate application security vulnerability assessments, penetration tests and risk assessments; investigate application security events and incidents, including forensic analysis; represent security interests on project teams by ensuring security standards and requirements; conduct security research, analysis and review of application solutions to ensure compliance with company security policies; evaluate new products and technologies to protect against existing and emerging security threats; and develop and implement information security policies and procedures.

Upon successful completion of this program, students will be able to:

1. Design and secure applications and services to protect critical assets.
2. Develop, test, and implement secure applications to safeguard critical information.
3. Manage ongoing maintenance and updates to applications and services to respond to changing security threats.

Degree Requirements:

Credit Hours: (28 - 29 Required)

CIS 005 or	Introduction to Computer Science	5
CIS 006 or	Introduction to Computer Programming	5
CIS 007 and	Control Structures and Objects	4
CIS 059 and	Applications in Information Security	3
CIS 071 and	Introduction to Information Systems Security	3
CIS 056 and	Secure Coding in Java and .NET	3
CIS 057 and	Web Application PEN Testing	3
CIS 055 and	Hacker Techniques, Exploits & Incident Handling	3
CIS 060 and	Computer Forensics Fundamentals	3
CIS 054 and	IT Security Goals, Strategy, Policy, and Leadership	3
COPED 469	Occupational Work Experience in Security Administration	3

Total: 28.000 - 29.000

Merritt Cybersecurity Program 3 – Infrastructure Security Certificate or A.S. Degree

The Infrastructure Security Certificate of Achievement provides best practices and competencies for students to design, install and implement services and applications; manage and optimize security infrastructure to ensure compliance with security controls; help prevent, detect, investigate and respond to operational security threats and attacks; facilitate security vulnerability assessments, penetration tests and risk assessments; investigate security events and incidents, including forensic analysis; represent security interests on project teams by ensuring security standards and requirements; conduct security research, analysis and review of infrastructure designs to ensure compliance with company security policies; evaluate new products and technologies to protect against existing and emerging security threats; and develop and implement information security policies and procedures.

Upon successful completion of this program, students will be able to:

1. Install & Configure software and upgrades
2. Install, configure & test network devices, servers and workstations
3. Troubleshoot hardware & network problems

Degree Requirements:

Credit Hours: (28 - 29 Required)

CIS 005 or	Introduction to Computer Science	5
CIS 006 or	Introduction to Computer Programming	5
CIS 007 and	Control Structures and Objects	4
CIS 072	Systems and Network Administration	3
CIS 052	Cloud Security Fundamentals	3
CIS 053	Intrusion Detection In-Depth: Compliance, Security, Forensics and Troubleshooting	3
CIS 055	Hacker Techniques, Exploits & Incident Handling	3
CIS 058	Hacker Guard – Baseline Training for IT Administrators and Operations	3
CIS 060	Computer Forensics Fundamentals	3
CIS 054	IT Security Goals, Strategy, Policy, and Leadership	3
COPED 469	Occupational Work Experience in Security Administration	3

Total: 28.000 - 29.000

Merritt Cybersecurity Program 4 – Information Security: CodePath Cert. or A.S.

This certificate indicates instruction in Information Security (Infosec) and completion of CodePath; a group of defense focused interactive scenarios in Information Security. These scenarios enables computer security professionals to hone their skills, gain vital experience, and demonstrate the Knowledge Skills and Abilities (KSA) used to identify candidates for recruitment into Information Security Careers. Aligned with ethical hacking scenarios, these interactive labs present industry-applicable real-world projects endorsed by major employers for students to solve. These projects cover the full spectrum of cybersecurity issues. In completing this course sequence, students gain practical training in application and hands-on demonstration of their knowledge in information security roles. Upon successful completion of this program, students will be able to:

Degree Requirements:

Year 1 First Semester

Credit Hours: (6 - 8 Required)

CIS 005 or	Introduction to Computer Science	5
CIS 006 or	Introduction to Computer Programming	5
CIS 007 or	Control Structures and Objects	4
CS 020 and	Python Application Programming	3
CIS 071 or	Introduction to Information Systems Security	3
CIS 072	Systems and Network Administration	3

Register for both courses at the start of the semester.

Year 1 Second Semester

Credit Hours: (6 Required)

CIS 055 and	Hacker Techniques, Exploits & Incident Handling	3
CIS 060	Computer Forensics Fundamentals	3

Year 2 Third Semester

Credit Hours: (6 Required)

CIS 053 or	Intrusion Detection In-Depth: Compliance, Security, Forensics and Troubleshooting	3
CIS 059 and	Applications in Information Security	3
CIS 052 or	Cloud Security Fundamentals	3
CIS 056	Secure Coding in Java and .NET	3

Year 2 Fourth Semester

Credit Hours: (10 Required)

CIS 057 and	Web Application PEN Testing	3
CIS 098 and	Database Programming with SQL	4
CIS 221	Cyber Safety, Online Identity, and Computer Literacy	3

*Enrollment in Merritt Course CIS 221 is required to enroll in CodePath. <https://www.codepath.org/>
Students must remain concurrently enrolled and complete exercises hosted on external systems.*

Total: 28.000 - 30.000

Merritt Cybersecurity Program 5: DevOps – Development and Operations Automation

DevOps is the use of software **DE**velopment tools to automate Information Systems **OP**erations. It requires Knowledge Skills and Abilities (KSA) of Information Technology (IT) components, configuration and programming that integrate IT components into Information Systems (IS), and the ability to automate the activities through use of the Application Programming Interfaces (API) published by equipment and service providers. The main characteristic of DevOps is to strongly advocate and implement automation and monitoring at all steps of software and infrastructure construction, from integration, testing, and releasing, to deployment and infrastructure management. DevOps aims at shorter development cycles, increased deployment frequency and more dependable releases in close alignment with business objectives.

Upon successful completion of this program, students will be able to:

1. Plan control of IT Components using Application Programming Interface (API)
2. Select IT operations for automation
3. Design Operations information flow for operations automation monitoring
4. Select and communicate key performance metrics and that define utilization baselines and operational norms.

Required IT Courses

Credit Hours: (12 - 17 Required)

Maps to IT Technician Certificate

CIS 110 and	Information and Communication Technology Essentials	4
CIS 005 or	Introduction to Computer Science	5
CIS 006 or	Introduction to Computer Programming	5
CIS 007 or	Control Structures and Objects	4
CS 020 and	Python Application Programming	3
CIS 073 or	Networking Concepts	4
CIS 106A and	Routing and Switching Networks	3
CIS 035	Microcomputer Operating Systems	4

Required Program Courses

Credit Hours: (19 Required)

Maps to Information Systems Analyst Certificate

CIS 051 and	Introduction to Information Technology Project Management	4
CIS 059 and	Applications in Information Security	3
CIS 062 and	Introduction to Systems Analysis and Design	3
CIS 072 and	Systems and Network Administration	3
CIS 107 and	Administering Cloud Services and Containers	3
CIS 108	Scripting for Systems Automation and Data Analysis	3

MERRITT COLLEGE

Office of Instruction

October 14, 2019

Right Varsity Technologies, LLC
P.O. Box 51616
San Jose, CA 95151

TO WHOM IT MAY CONCERN:

This letter confirms that Merritt College will serve as the Local Education Agency (LEA) for the RightVarsity Technology Workforce Immersion Apprenticeship Program.

This service will cover the following occupations:

- Application Developer
- Cyber Security Technician
- Helpdesk Technician
- IT Project Manager
- Information Assurance Specialist
- E-Commerce Specialist
- Clinical Document Improvement Specialist
- Health Information Data Analyst
- Health Information Management Business Analyst
- Health Information Management Coder
- Health IT Specialist

The geographic area covered by our service is the State of California. This service meets the requirements of the California Educational Code together with oversight guidelines. This letter does not assure Related and Supplemental Instruction funding.

If you have any questions about the IT Apprenticeship Program please contact Courtney Brown at courtneybrown@peralta.edu.

Sincerely,

A blue ink signature of David M. Johnson, Ph.D., written in a cursive style.

David M. Johnson, Ph.D.
Vice President of Instruction
Merritt College

The mission of Merritt College is to enhance the quality of life in the communities we serve by helping students to attain knowledge, master skills, and develop the appreciation, attitudes and values needed to succeed and participate responsibly in a democratic society and a global economy.

Using the DOL Competency Based Occupational Framework to Develop an Apprenticeship

A comprehensive CBOF full framework apprenticeship document for the Cybersecurity Support Technician follows this section. Though this document aligns with the first through final of Merritt's stackable programs leading the DevOps award. The Work Process Schedule included in this CBOF provides an overview of the job functions and competencies an expert peer group deemed to be important to this occupation. The Work Process Schedule in this document can be used directly or modified and used to describe your program content and design as part of your registration application.

When designing the curriculum to support the apprenticeship program – including on the job training and related technical instruction – the more detailed information in Section 5 could be helpful. These more detailed job function documents include recommendations for the key knowledge and skill elements that might be included in the classroom instruction designed to support a given job function, and the performance criteria provided under each competency could be helpful to trainers and mentors in evaluating apprentice performance and insuring inter-rater reliability when multiple mentors are involved. Merritt has [a noncredit career prep program](#) to help students develop “Cross-Cutting Competencies” CBOF Page 23.

	Cybersecurity Technician, Cybersecurity Support Tech - Work Progress Schedule (WPS) of Job Function and Education for Apprenticeship Training - Related Technology Instruction (RTI) and On-the-Job Training (OJT)		RTI Course	OJT Course
Job Function	Description - Based on Department of Labor Competency Based Occupational Framework for Apprenticeship	CBOF PAGE #		
1	Assists in developing security policies and protocols; assists in enforcing company compliance with network security policies and protocols	25	CIS 054	TBD
2	Provides technical support to users or customers	26	CIS 058, 053	TBD
3	Installs, configures, tests, operates, maintains and manages networks and their firewalls including hardware and software that permit sharing and transmission of information	30	CIS 072, 058, 053	
4	Installs, configures, troubleshoots and maintains server configurations to ensure their confidentiality, integrity and availability; also manages accounts, firewalls, configuration, patch and vulnerability management. Is responsible for access control, security configuration and administration	33	CIS 072, 071, 052	TBD
5	Configures tools and technologies to detect, mitigate and prevent potential threats	37	CIS 058, 053	
6	Assesses and mitigates system network, business continuity and related security risks and vulnerabilities	39	CIS 71, 72, 60, 55	
7	Reviews network utilization data to identify unusual patterns, suspicious activity or signs of potential threats	41	CIS 71, 72, 60, 55	
8	Responds to cyber intrusions and attacks and provides defensive strategies	43	CIS 053,058	

For this apprenticeship, training for Job functions 1,2, &5 would be determined by the employer who would enroll the apprentice is vendor-supplied training for the systems used on site. Course mapping to the NICE framework is found at: <https://niccs.us-cert.gov/training/search/merritt-college>

Cybersecurity Apprenticeships

Cybersecurity apprenticeships (“earn while you learn”) models represent a promising approach to attract, train, and retain a highly-skilled cybersecurity workforce.

Finding skilled cybersecurity talent is a well-known issue for employers in every sector. A method for increasing the supply of people with the desired combination of hands-on skills and academic knowledge is to build apprenticeship programs where participants can “earn while they learn.” Apprenticeships may be an important mechanism for building a steady pipeline of job-ready talent and providing entry points for those switching careers, without advanced degrees, or re-entering the field.

The National Initiative for Cybersecurity Education (NICE) strategic plan includes “Experiment with the use of apprenticeships and cooperative education programs to provide an immediate workforce that can earn a salary while they learn the necessary skills.”

“In my apprenticeship, I developed my skills while contributing in a real business, right alongside my mentor.”

– KP, apprentice, Peoria, IL

STUDENT BENEFITS

- Earn wages and an industry-recognized credential
- Train with employer and position yourself for full-time employment
- Gain real world job skills that can include earning college credits and/or industry certifications

VETERAN BENEFITS

- Access GI Bill benefits for a monthly stipend in addition to an apprenticeship wage
- Funding for books and classroom supplies

EMPLOYER BENEFITS

- Develop highly-skilled talent that matches your needs
- “Try before you buy” – ensure good cultural and skill fit
- Low cost to hire and high return on investment
- Low turnover and improved employee retention
- Opportunities for tax credits and employee tuition benefits in some states

86% of employers have to provide on-the-job training for traditional new hires.¹

CYBERSECURITY APPRENTICE ROLES*

Examples from current programs:

- Secure Software Developer
- Cybersecurity Analyst
- Computer Forensics Analyst

INDUSTRY-RECOGNIZED APPRENTICESHIPS

For information on developing an apprenticeship program, contact the US Department of Labor: <https://www.dol.gov/apprenticeship/>

“Cybersecurity apprenticeships are a traditional solution to a vexing new problem.”

– LA, apprentice employer, Norfolk, VA

ABOUT THE URBAN INSTITUTE

The nonprofit Urban Institute is dedicated to elevating the debate on social and economic policy. For nearly five decades, Urban scholars have conducted research and offered evidence-based solutions that improve lives and strengthen communities across a rapidly urbanizing world. Their objective research helps expand opportunities for all, reduce hardship among the most vulnerable, and strengthen the effectiveness of the public sector.

Acknowledgments

We thank Diane Auer Jones for her expertise and contributions to this document.

Competency-Based Occupational Frameworks

The Urban Institute, under contract by the U.S. Department of Labor, has worked with employers, subject matter experts, labor unions, trade associations, credentialing organizations and academics to develop Competency-Based Occupational Frameworks (CBOF) for Registered Apprenticeship programs. These frameworks defined the **purpose** of an occupation, the **job functions** that are carried out to fulfill that purpose, the **competencies** that enable the apprentice to execute those job functions well, and the **performance criteria** that define the specific knowledge, skills and personal attributes associated with high performance in the workplace. This organizational hierarchy – Job Purpose – Job Functions – Competencies – Performance Criteria – is designed to illustrate that performing work well requires more than just acquiring discrete knowledge elements or developing a series of manual skills. To perform a job well, the employee must be able to assimilate knowledge and skills learned in various settings, recall and apply that information to the present situation, and carry out work activities using sound professional judgment, demonstrating an appropriate attitude or disposition, and achieving a level of speed and accuracy necessary to meet the employer’s business need.

The table below compares the terminology of Functional Analysis with that of traditional Occupational Task Analysis to illustrate the important similarities and differences. While both identify the key technical elements of an occupation, Functional Analysis includes the identification of behaviors, attributes and characteristics of workers necessary to meet an employer’s expectations.

Framework Terminology	Traditional Task Analysis Terminology
Job Function – the work activities that are carried out to fulfill the job purpose	Job Duties – roles and responsibilities associated with an occupation
Competency – the actions an individual takes and the attitudes he/she displays to complete those activities	Task – a unit of work or set of activities needed to produce some result
Performance Criteria – the specific knowledge, skills, dispositions, attributes, speed and accuracy associated with meeting the employer’s expectations	Sub Task – the independent actions taken to perform a unit of work or a work activity

Although designed for use in competency-based apprenticeship, these Competency-Based Occupational Frameworks also support time-based apprenticeship by defining more clearly and precisely what the apprentice is expected to learn and do during the allocated time-period.

CBOFs are comprehensive in to encompass the full range of jobs that may be performed by individuals in the same occupation. As employers or sponsors develop their individual apprenticeship programs, they can extract from or add to the framework to meet their unique organizational needs.

Components of the Competency-Based Occupational Framework

Occupational Overview: This section of the framework provides a description of the occupation including its purpose, the setting in which the job is performed and unique features of the occupation.

Work Process Schedule: This section includes the job functions and competencies that would likely be included in an apprenticeship sponsor's application for registration. These frameworks provide a point of reference that has already been vetted by industry leaders so sponsors can develop new programs knowing that they will meet or exceed the consensus expectations of peers. Sponsors maintain the ability to customize their programs to meet their unique needs, but omission of a significant number of job functions or competencies should raise questions about whether or not the program has correctly identified the occupation of interest.

Cross-cutting Competencies: These competencies are common among all workers, and focus on the underlying knowledge, attitudes, personal attributes and interpersonal skills that are important regardless of the occupation. That said, while these competencies are important to all occupations, the relative importance of some versus others may change from one occupation to the next. These relative differences are illustrated in this part of the CBOF and can be used to design pre-apprenticeship programs or design effective screening tools when recruiting apprentices to the program.

Detailed Job Function Analysis: This portion of the framework includes considerable detail and is designed to support curriculum designers and trainers in developing and administering the program. There is considerable detail in this section, which may be confusing to those seeking a more succinct, higher-level view of the program. For this reason, we recommend that the Work Process Schedule be the focus of program planning activities, leaving the detailed job function analysis sections to instructional designers as they engage in their development work.

- a. **Related Technical Instruction:** Under each job function appears a list of foundational knowledge, skills, tools and technologies that would likely be taught in the classroom to enable the apprentice's on-the-job training safety and success.

- b. Performance Criteria: Under each competency, we provide recommended performance criteria that could be used to differentiate between minimally, moderately and highly competent apprentices. These performance criteria are generally skills-based rather than knowledge-based, but may also include dispositional and behavioral competencies.

Using the Competency-Based Occupational Framework to Develop a Registered Apprenticeship Program

When developing a registered apprenticeship program, the Work Process Schedule included in this CBOF provides an overview of the job functions and competencies an expert peer group deemed to be important to this occupation. The Work Process Schedule in this document can be used directly, or modified and used to describe your program content and design as part of your registration application.

When designing the curriculum to support the apprenticeship program – including on the job training and related technical instruction – the more detailed information in Section 5 could be helpful. These more detailed job function documents include recommendations for the key knowledge and skill elements that might be included in the classroom instruction designed to support a given job function, and the performance criteria provided under each competency could be helpful to trainers and mentors in evaluating apprentice performance and insuring inter-rater reliability when multiple mentors are involved.

Cyber Security Support Technician Occupational Overview

Occupational Purpose and Context

Cyber security professionals work to maintain the security and integrity of information technology systems, networks and devices. According to the National Cybersecurity Workforce Framework, cyber security professionals perform one or more of the following functions: securely provision, operate and maintain, protect and defend, investigate, collect and operate, analyze and provide oversight and development.

Cyber security support technicians and analysts can be employees of small to large companies, non-profits and government agencies, can be outside contractors that provide services to other organizations, and can be self-employed or start their own service company.

Potential Job Titles

Cyber security analyst, cyber security monitor, vulnerability analyst, information systems security analyst, network security analyst

Attitudes and Behaviors

Cyber security support technicians need to be detail oriented, enjoy working with technology, apply logic to solve complex problems and work with a wide range of people, including other technical staff as well as non-technical users of information technology equipment and systems. These individuals also need to have patience and be able to review large amounts of data to identify and mitigate against potential vulnerabilities or threats.

Apprenticeship Prerequisites

n/a

Occupational Pathways

Cyber security support technicians, with experience and additional certifications, can move into a variety of positions, including security analyst, network security engineer, information systems security manager and information assurance security officer.

Certifications, Licensure and Other Credential Requirements

CREDENTIAL	Offered By	Before, During or After Apprenticeship
CompTia Security+ (Certification)	CompTia	During or After
Certified Information Systems Security Professional (CISSP) (Certification)	(ISC) ²	Requires 5 years of work experience in the security field
Multiple Vendor Certifications available, such as CISCO,		During or After

Job Functions

JOB FUNCTIONS		Core or Optional	Level
1.	Assists in developing security policies and protocols: assists in enforcing company compliance with network security policies and protocols		
2.	Provides technical support to users or customers		
3.	Installs, configures, tests, operates, maintains and manages networks and their firewalls including hardware and software that permit sharing and transmission of information		
4.	Installs, configures, troubleshoots and maintains server configurations to ensure their confidentiality, integrity and availability; also manages accounts, firewalls, configuration, patch and vulnerability management. Is responsible for access control, security configuration and administration		
5.	Configures tools and technologies to detect, mitigate and prevent potential threats		
6.	Assesses and mitigates system network, business continuity and related security risks and vulnerabilities		
7.	Reviews network utilization data to identify unusual patterns, suspicious activity or signs of potential threats		
8.	Responds to cyber intrusions and attacks and provides defensive strategies		

Stackable Programs

This occupational framework is designed to link to the following additional framework(s) as part of a career laddering pathway.

Stackable Programs		Base or Higher Level	Stacks on top of
1.	This program is designed to stack on top of the IT Generalist Framework for those who have little or no prior IT	Higher Level	IT Generalist

	experience.		
2.			
3.			
4.			

Options and Specializations

The following options and specializations have been identified for this occupation. The Work Process Schedule and individual job function outlines indicate which job functions and competencies were deemed by industry advisors to be optional. Work Process Schedules for Specializations are included at the end of this document.

Options and Specializations	Option	Specialization

Levels

Industry advisors have indicated that individuals in this occupation may function at different levels, based on the nature of their work, the amount of time spent in an apprenticeship, the level of skills or knowledge mastery, the degree of independence in performing the job or supervisory/management responsibilities.

Level	Distinguishing Features	Added Competencies	Added Time Requirements

NICE Framework Alignment

The National Initiative for Cybersecurity Education (NICE), led by the National Institute of Standards and Technology (NIST) in the U.S. Department of Commerce, is a partnership between government, academia, and the private sector focused on cybersecurity education, training, and workforce development. Located in the [Information Technology Laboratory](#) at NIST, the NICE Program Office operates under the [Applied Cybersecurity Division](#), positioning the program to support the country's ability to address current and future cybersecurity challenges through standards and best practices.

The mission of NICE is to energize and promote a robust network and an ecosystem of cybersecurity education, training, and workforce development. NICE fulfills this mission by coordinating with government, academic, and industry partners to build on existing successful programs, facilitate change and innovation, and bring leadership and vision to increase the number of skilled cybersecurity professionals helping to keep our nation secure.

The National Initiative for Cybersecurity Education (NICE) Cybersecurity Workforce Framework (NICE Framework) is a reference structure that describes the interdisciplinary nature of cybersecurity work. It serves as a fundamental reference resource for describing and sharing information about cybersecurity work and the knowledge, skills, and abilities (KSAs) needed to complete tasks that can strengthen the cybersecurity posture of an organization. As a common, consistent lexicon that categorizes and describes cybersecurity work, the NICE Framework improves communication about how to identify, recruit, develop, and retain cybersecurity talent. The NICE Framework is a reference source from which organizations or sectors can develop additional publications or tools that meet their needs to define or provide guidance on different aspects of cybersecurity workforce development, planning, training, and education.

The NICE Framework is available at:

<http://nvlpubs.nist.gov/nistpubs/SpecialPublications/NIST.SP.800-181.pdf>

We have mapped the Competency-Based Occupational Framework for Cyber Security Technician to the NICE framework to ensure that our work is consistent with the lexicon developed by the NICE initiative. The Cyber Security Support Technician role is not one of the occupations specified in the NICE Framework, so our work draws from the introductory level competencies associated with several different specialty occupations within the NICE Framework.

NICE Framework Category: Each of our competencies is mapped to the appropriate Framework Category in the NICE Framework. These categories include:

- SP – Securely Provision
- OM – Operate and Maintain
- OV – Oversee and Govern
- PR – Protect and Defend
- AN – Analyze
- CO – Collect and Operate
- IN - Investigate

NICE Framework Specialty Area: Within each Framework Category are a number of specialty areas that more narrowly define an individual job role or roles. Our Occupational Frameworks include the Specialty Area associated with each of our competencies. For example, within the Category of Securely Provision, there are 7 specialty areas including:

- Risk Management (RSK)
- Software Development (DEV)
- Systems Architecture (ARC)
- Systems Requirements Planning (SRP)

- Technology R&D (TRD)
- Test and Evaluation (TST)
- Systems Development (SYS)

NICE Tasks, Knowledge, Skills and Abilities: We have mapped each of the knowledge, skills, abilities and performance criteria in our Occupational Framework to the appropriate ID number that appears in the NICE Framework tables.

For example:

T0001 is a NICE Task defined as: Acquire and manage the necessary resources, including leadership support, financial resources, and key security personnel, to support information technology (IT) security goals and objectives and reduce overall organizational risk.

K0001 is a NICE Framework Knowledge element defined as: Knowledge of computer networking concepts and protocols, and network security methodologies.

S0001 is a NICE Framework Skill Requirement defined as: Skill in conducting vulnerability scans and recognizing vulnerabilities in security systems.

A0001 is a NICE Framework Ability Code defined as: Ability to identify systematic security issues based on the analysis of vulnerability and configuration data.

Work Process Schedule

WORK PROCESS SCHEDULE		ONET Code: 15.1122	
Cyber Security Support Technician		RAPIDS Code: 2050CB	
<p>NOTE: This occupational framework has been mapped to the NICE Framework to ensure consistency with the lexicon developed by the NICE working group (https://www.nist.gov/itl/applied-cybersecurity/nice/resources/nice-cybersecurity-workforce-framework)</p>

JOB FUNCTION 1: Assists in developing security policies and protocols; assists in enforcing company compliance with network security policies and protocols			
Competencies	Level	NICE Framework Category	NICE Framework Specialty Area
A. Locates (in Intranet, employee handbook or security protocols) organizational policies intended to maintain security and minimize risk and explains their use	Basic	Oversee and Govern	Education and Training
B. Provides guidance to employees on how to access networks, set passwords, reduce security threats and provide defensive measures associated with searches, software downloads, email, Internet, add-ons, software coding and	Advanced	Securely Provision	Information Assurance Compliance

transferred files			
C. Ensures that password characteristics are explained and enforced and that updates are required and enforced based on appropriate time intervals	Basic	Securely Provision	Information Assurance Compliance
D. Explains company or organization's policies regarding the storage, use and transfer of sensitive data, including intellectual property and personally identifiable information. Identifies data life cycle, data storage facilities, technologies and describes business continuity risks	Intermediate	Oversee and Govern	Education and Training
E. Assigns individuals to the appropriate permission or access level to control access to certain web IP addresses, information and the ability to download programs and transfer data to various locations	Advanced	Securely Provision	Information Assurance Compliance
F. Assists employees in the use of technologies that restrict or allow for remote access to the organization's information technology network	Intermediate	Oversee and Develop	Education and Training
G. Develops security compliance policies and protocols for external services (i.e. Cloud service providers, software services, external data centers)	Advanced	Securely Provision	Information Assurance Compliance
H. Complies with incident response and handling methodologies	Advanced	Protect and Defend	Computer Network Defense Analysis
I. Articulates the business need or mission of the organization as it pertains to the use of IT systems and the storage of sensitive data	Intermediate	Securely Provision	System Security Architecture

JOB FUNCTION 2: Provides technical support to users or customers			
Competencies	Level	NICE Framework Category	NICE Framework Specialty Area
A. Manages inventory of IT resources	Basic	Operate/Maintain	Customer Service and Technical Support

B. Diagnoses and resolves customer-reported system incidents	Intermediate	Investigate	Digital forensics
C. Installs and configures hardware, software and peripheral equipment for system users	Basic	Operate/ Maintain	Customer Service and Technical Support
D. Monitors client-level computer system performance	Basic	Operate/ Maintain	Customer Service and Technical Support
E. Tests computer system performance	Basic	Operate/ Maintain	Customer Service and Technical Support
F. Troubleshoots system hardware and software	Basic	Operate/ Maintain	Customer Service and Technical Support
G. Administers accounts, network rights, and access to systems and equipment	Intermediate	Operate/ Maintain	Customer Service and Technical Support
H. Implements security measures for uses in system and ensures that system designs incorporate security configuration guidelines	Advanced	Operate/ Maintain	Systems Security Analysis

JOB FUNCTION 3: Installs, configures, tests, operates, maintains and manages networks and their firewalls including hardware and software that permit sharing and transmission of information

Competencies	Level	NICE Framework Category	NICE Framework Specialty Area
A. Collaborates with system developers and users to assist in the selection of appropriate design solutions to ensure the compatibility of system components	Intermediate	Securely Provision	Systems Security Architecture
B. Installs, replaces, configures and optimizes network hubs, routers and switches	Advanced	Operate and Maintain	Network Services
C. Assists in network backup and recovery procedures	Intermediate	Operate and	Network Services

		Maintain	
D. Diagnoses network connectivity problems	Basic	Operate and Maintain	Network Services
E. Modifies network infrastructure to serve new purposes or improve workflow	Advanced	Operate and Maintain	Network Services
F. Integrates new systems into existing network architecture	Intermediate	Operate and Maintain	Network Services
G. Patches network vulnerabilities to ensure information is safeguarded against outside parties	Intermediate	Operate and Maintain	Network Services
H. Repairs network connectivity problems	Basic	Operate and Maintain	Network Services
I. Tests and maintains network infrastructure including software and hardware devices	Basic	Operate and Maintain	Network Services
J. Establishes adequate access controls based on principles of least privilege and need-to-know	Intermediate	Operate and Maintain	Network Services
K. Implements security measures for users in system and ensures that system designs incorporate security configuration guidelines	Basic	Operate and Maintain	Systems Security Analysis

JOB FUNCTION 4: Installs, configures, troubleshoots and maintains server configurations to ensure their confidentiality, integrity and availability; also manages accounts, firewalls, configuration, patch and vulnerability management. Is responsible for access control, security configuration and administration

Competencies	Level	NICE Framework Category	NICE Framework Specialty Area
A. Checks system hardware availability, functionality, integrity and efficiency	Intermediate	Operate and Maintain	System Admin
B. Conducts functional and connectivity testing to ensure continuing operability	Basic	Operate and Maintain	System Admin

C. Conducts periodic server maintenance including cleaning (physically and electronically), disk checks, system configuration and monitoring, data downloads, backups and testing	Basic	Operate and Maintain	System Admin
D. Assists in the development of group policies and access control lists to ensure compatibility with organizational standards, business rules and needs	Advanced	Operate and Maintain	System Admin
E. Documents compliance with or changes to system administration standard operating procedures	Intermediate	Operate and Maintain	System Admin
F. Installs server fixes, updates and enhancements	Intermediate	Operate and Maintain	System Admin
G. Maintains baseline system security according to organizational policies	Intermediate	Operate and Maintain	System Admin
H. Manages accounts, network rights and access to systems and equipment	Basic	Operate and Maintain	System Admin
I. Monitors and maintains server configuration	Intermediate	Operate and Maintain	System Admin
J. Supports network components	Basic	Operate and Maintain	System Admin
K. Diagnoses faulty system/server hardware; seeks appropriate support or assistance to perform server repairs	Basic	Operate and Maintain	System Admin
L. Verifies data redundancy and system recovery procedures	Intermediate	Operate and Maintain	System Admin
M. Assists in the coordination or installation of new or modified hardware, operating systems and other baseline software	Intermediate	Operate and Maintain	System Admin
N. Provides ongoing optimization and problem-solving support	Intermediate	Operate and Maintain	System Admin
O. Resolves hardware/software interface and interoperability problems	Basic	Operate and	System Admin

		Maintain	
P. Establishes adequate access controls based on principles of least privilege, role based access controls (RBAC) and need-to-know	Advanced	Operate and Maintain	System Admin

JOB FUNCTION 5: Configures tools and technologies to detect, mitigate and prevent potential threats

Competencies	Level	NICE Framework Category	NICE Framework Specialty Area
A. Installs and maintains cyber security detection, monitoring and threat management software	Intermediate		
B. Coordinates with network administrators to administer the updating of rules and signatures for intrusion/detection protection systems, anti-virus and network black and white list	Intermediate		
C. Manages IP addresses based on current threat environment	Intermediate		
D. Ensures application of security patches for commercial products integrated into system design	Basic		
E. Uses computer network defense tools for continual monitoring and analysis of system activity to identify malicious activity	Advanced		

JOB FUNCTION 6: Assesses and mitigates system network, business continuity and related security risks and vulnerabilities

Competencies	Level	NICE Framework Category	NICE Framework Specialty Area
A. Applies security policies to meet security objectives of the system	Intermediate	Operate and Maintain	Systems Security Analysis
B. Performs system administration to ensure current defense applications are in place, including on Virtual Private Network devices	Intermediate	Operate and Maintain	Systems Security Analysis

C. Ensures that data back up and restoration systems are functional and consistent with company's document retention policy and business continuity needs	Basic	Operate and Maintain	Systems Security Analysis
D. Identifies potential conflicts with implementation of any computer network defense tools. Performs tool signature testing and optimization	Advanced	Operate and Maintain	Systems Security Analysis
E. Installs, manages and updates intrusion detection system	Advanced	Operate and Maintain	Systems Security Analysis
F. Performs technical and non-technical risk and vulnerability assessments of relevant technology focus areas	Advanced	Protect and Defend	Vulnerability Assessment & Management
G. Conducts authorized penetration testing (Wi-Fi, network perimeter, application security, cloud, mobile devices) and assesses results	Intermediate	Protect and Defend	Vulnerability Assessment & Management
H. Documents systems security operations and maintenance activities	Intermediate	Operate and Maintain	Systems Security Analysis
I. Communicates potential risks or vulnerabilities to manager. Collaborates with others to recommend vulnerability corrections	Advanced	Protect and Defend	Computer Network Defense and Analysis
J. Identifies information technology security program implications of new technologies or technology upgrades	Advanced	Protect and Defend	Computer Network Defense and Analysis

JOB FUNCTION 7: Reviews network utilization data to identify unusual patterns, suspicious activity or signs of potential threats

Competencies	Level	NICE Framework Category	NICE Framework Specialty Area
A. Identifies organizational trends with regard to the security posture of systems; identifies unusual patterns or activities	Basic	Operate and Maintain	Systems Security Analysis
B. Characterizes and analyzes network traffic to identify anomalous activity and potential	Advanced	Protect and	Computer network

threats; performs computer network defense trend analysis and reporting		Defend	Defense and Analysis
C. Receives and analyzes network alerts from various sources within the enterprise and determines possible causes of such alerts	Advanced	Protect and Defend	Computer network Defense and Analysis
D. Runs tests to detect real or potential threats, viruses, malware, etc.	Advanced		
E. Assists in researching cost-effective security controls to mitigate risks	Intermediate	Protect and Defend	Vulnerability Assessment and Management
F. Helps perform damage assessments in the event of an attack	Advanced		
G. Monitors network data to identify unusual activity, trends, unauthorized devices or other potential vulnerabilities	Advanced	Operate and Maintain	Systems Security Analysis
H. Documents and escalates incidents that may cause immediate or long-term impact to the environment	Intermediate	Protect and Defend	Computer network Defense Analysis
I. Provides timely detection, identification and alerts of possible attacks and intrusions, anomalous activities, and distinguish these incidents and events from normal baseline activities	Advanced	Protect and Defend	Computer network Defense Analysis
J. Uses network monitoring tools to capture and analyze network traffic associated with malicious activity	Advanced	Investigate	Digital Forensics
K. Performs intrusion analysis	Advanced	Investigate	Digital Forensics
L. Sets containment blockers to align with company policy regarding computer use and web access	Intermediate	Protect and Defend	Computer network Defense Analysis

JOB FUNCTION 8: Responds to cyber intrusions and attacks and provides defensive strategies

Competencies	Level	NICE Framework Category	NICE Framework Specialty
--------------	-------	-------------------------	--------------------------

			Area
A. Assists in the development of appropriate courses of action in response to identified anomalous network activity	Advanced	Protect and Defend	Computer network Defense Analysis
B. Triage systems operations impact: malware, worms, man-in-the-middle attack, denial of service, rootkits, keystroke loggers, SQL injection and cross-site scripting	Advanced	Protect and Defend	Computer network Defense Analysis
C. Reconstructs a malicious attack or activity based on network traffic	Advanced	Protect and Defend	Computer network Defense Analysis
D. Correlates incident data to identify specific vulnerabilities and make recommendations that enable expeditious remediation	Advanced	Protect and Defend	Incident Response
E. Monitors external data sources to maintain currency of Computer Network Defense threat condition and determines which security issues may have an impact on the enterprise. Performs file signature analysis	Advanced	Protect and Defend	Incident Response
F. Performs analysis of log files from a variety of sources to identify threats to network security; performs file signature analysis	Advanced	Protect and Defend	Incident Response
G. Performs computer network defense incident triage to include determining scope, urgency and potential impact; identifies the specific vulnerability; provides training recommendations; and makes recommendations that enable expeditious remediation	Advanced	Protect and Defend	Incident Response
H. Receives and analyzes network alerts from various sources within the enterprise and determines possible causes of such alerts	Advanced	Protect and Defend	Incident Response
I. Tracks and documents computer network defense incidents from initial detection through final resolution	Intermediate	Protect and Defend	Incident Response
J. Collects intrusion artifacts and uses discovered data to enable mitigation of potential computer network defense (CND) incidents	Advanced	Protect and Defend	Incident Response
K. Performs virus scanning on digital media	Basic	Investigate	Digital

			forensics

**Cross-cutting competencies are defined in the Competency Model Clearinghouse:

<https://www.careeronestop.org/CompetencyModel/competency-models/building-blocks-model.aspx>

Cross-Cutting Competencies identify transferable skills – sometimes called “soft skills” or “employability skills” – that are important for workplace success, regardless of a person’s occupation. Still, the relative importance of specific cross-cutting competencies differs from occupation to occupation. The Cross-Cutting Competencies table, above, provides information about which of these competencies is most important to be successful in a particular occupation. This information can be useful to employers or intermediaries in screening and selecting candidates for apprenticeship programs, or to pre-apprenticeship providers that seek to prepare individuals for successful entry into an apprenticeship program.

The names of the cross-cutting competencies come from the U.S. Department of Labor’s Competency Model Clearinghouse and definitions for each can be viewed at:

<https://www.careeronestop.org/CompetencyModel/competency-models/building-blocks-model.aspx>

The scoring system utilized to evaluate the level of competency required in each cross cutting skill aligns with the recommendations of the Lumina Foundation’s Connecting Credentials Framework. The framework can be found at: <http://connectingcredentials.org/wp-content/uploads/2015/05/ConnectingCredentials-4-29-30.pdf>

Detailed Job Functions

JOB FUNCTION 1: Assists in developing security policies and protocols; assists in enforcing company compliance with network security policies and protocols

--	---	--

	Core or Optional	Level
Competency A: Collaborates with system developers and users to assist in the selection of appropriate design solutions to ensure the compatibility of system component (T0200/T0201)	Optional	Advanced
Competency B: Installs, replaces, configures and optimizes network hubs, routers and switches (T0035/T0126)	Optional	Advanced

Competency C: Assists in network backup and recovery procedures (T0065)	Opt	Advanced
Competency D: Diagnoses network connectivity problems (T0081)	Opt	Advanced
Competency E: Modifies network infrastructure to serve new purposes or improve workflow	Opt	Advanced
Competency F: Integrates new systems into existing network architecture (T0121/T0129)	Opt	Advanced
Competency G: Patches network vulnerabilities to ensure information is safeguarded against outside parties (T0125/T0160)	Opt	Advanced
Competency H: Repairs networks connectivity problems (T0081)	Opt	Advanced
Competency I: Tests and maintains network infrastructure including software and hardware devices (T0153/T0232)	Core	Intermediate
Competency J: Establishes adequate access controls based on principles of least privilege and need-to-know (T0475)	Core	Advanced
Competency K: Implements security measures for users in system and ensures that system designs incorporate security configuration guidelines (T0461)	Core	Basic

JOB FUNCTION 4: Installs, configures, troubleshoots and maintains server configurations to ensure their confidentiality, integrity and availability; also manages accounts, firewalls, configuration, patch and vulnerability management. Is responsible for access control, security configuration and administration
